

JADE OS + Hot Shot TMS

Six AI agents + an operator-built TMS for an underserved market. Both ready to deploy.

Minneapolis · MN · 2026

BUILT BY A 13-YEAR TRANSPORTATION OPERATOR

Built by a 13-year operator

Not built by software founders who read a book about logistics.

- 13 years inside transportation operations · dispatch · pricing · compliance · driver management
- Hot Shot TMS is the system the operator built because no incumbent TMS serves this segment
- JADE OS is the AI layer that automates the decisions the operator made 60 times a day
- We don't ship to logistics — we ship FROM logistics

The operator's bleed · and the TMS gap

- Empty miles still 15-22% of fleet hours · ATRI 2024
- 60+ dispatch decisions per shift, mostly tribal knowledge
- Compliance violations cost \$1k-\$5k each · FMCSA enforcement
- Driver replacement cost ~\$9.5k · turnover ~78% mid-market
- Incumbent TMS vendors over-serve enterprise · under-serve the hot-shot / small-to-mid carrier segment we target

Two products. One investable thesis.

- HOT SHOT TMS · system of record for an underserved freight segment · fully developed · deployment-ready
- JADE OS · six AI agents that work on top of Hot Shot TMS or any existing TMS (Descartes / McLeod / TMW)
- Why both at once · VCs want AI on top of existing TMS · our segment HAS no TMS to put it on top of
- Strategy · launch the TMS into the underserved market · sell agents into existing TMS users in parallel

Six agents · ship-status honest

- M4 · Pricing + Rate-Floor Guard · LIVE in production today · `/api/quotes/validate`
- M2 · Route + Fuel Agent · LIVE · OSRM routing + real OSM truck stops · MILP pending Pilot
- M3 · Compliance + Safety · LIVE · FMCSA §395 codified · audit-pack PDF pending Pilot
- M1 · Dispatch Optimizer · PILOT-PHASE · deterministic MVP at `/api/agent/dispatch/recommend`
- M5 · Driver Lifecycle · PILOT-PHASE · `/api/agent/retention/risk` · 0-100 weighted scoring
- M6 · Predictive Maintenance · PILOT-PHASE · `/api/agent/maintenance/window` · J1939 + PM thresholds

Why this combination wins

- Greenfield TMS · we target the segment incumbent TMS vendors deprioritize · less competition · faster sales cycle
- Operator credibility · 13 years inside trucks, not 13 quarters inside slides
- Agents work both ways · sell on top of Hot Shot OR on top of the prospect's existing TMS
- Audit substrate · SHA-256 hash chain, rate-floor guard, immutable claims · enterprise-ready from day 0
- Real prospects · 14 FMCSA-verified MN freight companies seeded · zero synthetic leads

ROI · Mid-Market · 175 trucks

- Annual savings ~ \$1.8M – \$2.4M (6 cost-savings categories · benchmark-cited)
- Upfront \$130k · Annual license \$210k · 3-yr NPV ~ \$4.5M @ 10% discount
- Payback ~2-3 months · sensitivity band $\pm 10\%$
- Live ROI Modeler at /demo · prospect can recompute on their own
- Sources · ATA · ATRI 2024 · BLS OEWS · EIA diesel · FMCSA · NICB

Where we are today · build complete · ready to deploy

- Hot Shot TMS · fully developed · deployment-ready · zero customers yet by design (raising to launch)
- JADE OS · production console live at /demo · 7 agent tabs · 6 OP labs · 8-phase 43-substep execution tracker
- FMCSA-anchored Minnesota target list seeded in workbench · hot-list prospects identified
- Workflow Memory + Active Claims + Risk Guard + Trucker AI all production-class today
- Brand re-themer · type a company name → Claude Sonnet writes brand profile → app re-skins instantly

vs. Descartes / Omnitracs / Geotab / internal-build

- Descartes · over-serves enterprise · we own the segment they deprioritize · agents still sit ABOVE Descartes for their customers
- Omnitracs · telematics-strong · we consume the feed + add rate-floor guard + audit chain they don't ship
- Geotab · visibility · we turn visibility into decisions; Hot Shot TMS captures the system of record
- Internal build · 3 hires + 18 months · JADE OS + Hot Shot TMS · build-complete today · pilot in 90 days

Go-to-market · launch both in tandem

- Track A · sell JADE OS agents to existing TMS users (Descartes/McLeod/TMW shops) · ~30 hot-list MN carriers
- Track B · sell Hot Shot TMS into the underserved hot-shot / small-mid carrier segment that has no good TMS today
- Pilots at \$25-40k all-in · 90 days · success metrics declared pre-pilot in writing
- Channel · direct for top 5 prospects · TAM (Trucking Assoc of MN) for warm intros · LinkedIn for the rest
- Both tracks share the same engineering + sales team · one cap table · two revenue lines

Pricing · pilot to scale

- Pilot · 6 months · \$25-40k all-in · subsidized integration · decision checkpoint at month 4
- Hot Shot TMS license · \$1,200/truck/year (mid-market) · custom enterprise tier
- JADE OS agents · same \$1,200/truck/year · sold standalone or bundled with TMS
- Pilot exit · roll-forward credit if customer converts to annual

The Ask

\$1.5M seed · 18-month runway · launch both products in tandem

- Hire · 1 senior backend (multi-tenant + TMS connectors) · 1 sales lead · 1 customer success
- Land · 3 paid TMS launches in underserved segment · 2 paid agent conversions in existing-TMS segment
- Ship · multi-tenant rollout · M2 fuel-MILP · M3 audit-pack PDF · APScheduler · SOC 2 readiness
- 30-min discovery this week · investor-pitch + technical-brief + execution-plan PDFs available now
