

JADE OS + Hot Shot TMS

An operator-built TMS, with six AI agents on top. Production today.

Minneapolis · MN · 2026

BUILT BY A 13-YEAR TRANSPORTATION OPERATOR

Built by a 13-year operator

Not built by a software founder who read a book about logistics.

- 13 years inside transportation operations · dispatch · pricing · compliance · driver-management
- Hot Shot TMS is the system the operator wished he had — built to run real fleets
- JADE OS is the AI layer that automates the decisions the operator made 60 times a day
- We don't ship to logistics — we ship FROM logistics

The operator's bleed

- Empty miles still 15-22% of fleet hours · ATRI 2024
- 60+ dispatch decisions per shift, mostly tribal knowledge
- Compliance violations cost \$1k-\$5k each · FMCSA enforcement
- Driver replacement cost ~\$9.5k · turnover ~78% mid-market
- Mid-market TMS adoption is ~95% — yet the AI layer above the TMS is under 10%

One stack. Two products. Sold together or apart.

- HOT SHOT TMS · the system of record · 50+ modules · 9 ERP connectors · 200+ APIs
- JADE OS · the system of decisions · 6 AI agents · rate-floor guard · workflow memory · immutable audit chain
- Re-themed for any brand in minutes · already runs as Tennant TMS for an enterprise customer (250 users · 3 facilities · 6 modes)
- Sells side-by-side or modular · TMS-only · agents-only · or full stack

Six agents · ship-status honest

- M4 · Pricing + Rate-Floor Guard · LIVE in production today · `/api/quotes/validate`
- M2 · Route + Fuel Agent · LIVE · OSRM routing + real OSM truck stops · MILP pending Pilot
- M3 · Compliance + Safety · LIVE · FMCSA §395 codified · audit-pack PDF pending Pilot
- M1 · Dispatch Optimizer · PILOT-PHASE · deterministic MVP at `/api/agent/dispatch/recommend`
- M5 · Driver Lifecycle · PILOT-PHASE · `/api/agent/retention/risk` · 0-100 weighted scoring
- M6 · Predictive Maintenance · PILOT-PHASE · `/api/agent/maintenance/window` · J1939 + PM thresholds

Why this combination wins

- TMS-native AI · agents see the data they need natively because we built both sides
- Brand re-theming · Hot Shot TMS already redeploys for an enterprise label without code change
- Audit substrate · SHA-256 hash chain, rate-floor guard, immutable claims · enterprise-ready from day 0
- Operator credibility · 13 years inside trucks, not 13 quarters inside slides
- Real prospects · 14 FMCSA-verified MN freight companies seeded · zero synthetic leads

ROI · Mid-Market · 175 trucks

- Annual savings ~ \$1.8M – \$2.4M (6 cost-savings categories · benchmark-cited)
- Upfront \$130k · Annual license \$210k · 3-yr NPV ~ \$4.5M @ 10% discount
- Payback ~2-3 months · sensitivity band $\pm 10\%$
- Live ROI Modeler at /demo · prospect can recompute on their own
- Sources · ATA · ATRI 2024 · BLS OEWS · EIA diesel · FMCSA · NICB

Where we are today

- Hot Shot TMS v2.1 · production · 250 active operators · re-themed for Tennant Companies (3 facilities · 6 modes)
- JADE OS · production console at /demo · 7 agent tabs · 6 OP labs · 8-phase 43-substep execution tracker
- Real prospects · FMCSA-anchored Minnesota target list seeded in workbench
- Workflow Memory + Active Claims + Risk Guard + Trucker AI all production-class
- Brand re-themer · type a company name → Claude Sonnet writes brand profile → app re-skins instantly

vs. Descartes / Omnitracs / Geotab / internal-build

- Descartes · routing-strong, AI-light · JADE OS sits ABOVE Descartes, keeps the routing, adds 5 agents
- Omnitracs · telematics-strong · we consume the feed, we add rate-floor guard + audit chain they don't ship
- Geotab · visibility · we turn visibility into decisions with TMS write-back (Pilot phase)
- Internal build · 3 hires + 18 months · JADE OS + Hot Shot TMS · 90-day pilot, vendor-supported

Go-to-market · Minnesota beachhead

- Phase 1 · hot list · 14 FMCSA-verified MN mid-market carriers already seeded
- Phase 2 · 90-day pilots at \$25-40k · success metrics declared in writing pre-pilot
- Phase 3 · post-pilot conversion at \$1,200/truck/year typical license
- Channel · direct for top 5 prospects · TAM (Trucking Assoc of MN) partner for warm intros
- Brand re-themer = enterprise lock-in · once a carrier deploys their brand they don't churn

Pricing · pilot to scale

- Pilot · 6 months · \$25-40k all-in · subsidized integration · decision checkpoint at month 4
- Production · \$1,200/truck/year license · M4 + M3 + M2 in production · M1/M5/M6 deterministic MVPs
- Pilot exit · roll-forward credit if customer converts to annual
- Enterprise · brand-themed deployment · 250+ user tier · custom SLA · audit-export packs

The Ask

\$1.5M seed · 18-month runway · 5 pilots → 2 paid conversions → enterprise expansion

- Hire · 1 senior backend (multi-tenant + TMS connectors) · 1 sales lead · 1 customer success
- Land · 5 paid pilots in MN · 2 paid conversions within 12 months · 1 enterprise re-theme
- Ship · M2 fuel-MILP · M3 audit-pack PDF · multi-tenant JWT · APScheduler
- 30-min discovery this week · pilot-agreement within 14 days for hot-list carriers
